

10-10-2012

To whom it may concern:

My name is (b)(6) and  
I lived (b)(6) Central  
Land, Diarr L.C. located at (b)(6)  
(b)(6)

Both my (b)(6) and I had  
health problems before the diary  
operations began. My concern is  
they may have progressed at a faster  
rate due to the smell, chemicals, insects  
and rodents which come from the diary.  
After spraying certain chemicals, the  
bugs and rodents would cross the  
road and enter my yard.

The odor after they sprayed the  
sheep was terrible! You could not  
keep your windows open or sit on the  
deck. Hanging out the laundry or bar-b-queing  
was out of the picture. Who wants to  
smell or eat cow poop?

My (b)(6) did not have  
cancer before the diary opened - but he  
died of cancer on 9-2-2009. Was this  
caused by the chemicals? I don't  
have proof - but I think it may  
have been.

I now have trouble with my  
(b)(6) I am generally  
not as healthy as I was since the  
diary opened. I have a low white  
blood count.

ATTACHMENT E

This (b)(6) Causes me to have a harder time with any illness I get. Ex: A cold or flu are much harder and take longer to cure. I am generally run down and tired a lot. How much of this was caused by the odors and chemicals; or sped up by them? Again - who knows.

I finally moved in (b)(6) I am still doctoring, but at least I am happier. I now can enjoy my home & yard. I can hang out laundry and <sup>have</sup> guests over for a bar-b-q, which I was unable to due living across from the diary.

Thank you for listening.

(b)(6)

(b)(6) and her (b)(6) lived on (b)(6). They originally bought the property for recreation, then built their retirement home there 17 years ago. (b)(6) talks of how the promoters for the farm came around to all the neighbors with brochures and samples of clean smelling dirt to convince them they would be good neighbors. They talked of the self contained energy cycle produced by the methane gas, relating it to a similar system employed by an island country, and they talked of controlled recycling of manure to fertilize the crops. Eventually, the confined animal feeding dairy operation was built across the road from them.

Once the pivot spraying of manure began, their lives changed considerably. The smell was overwhelming. (b)(6) cancelled the newspaper because it was always wet and smelly from the overspray. She stopped hanging clothes out to dry. Her (b)(6) who was confined to a wheelchair could no longer sit outside and enjoy bird watching because of the odor. The overspray on his wheelchair ramp made it dangerous to go in and out of the house unassisted while (b)(6) worked. Flies would accumulate a foot high on their screens, attracted by whatever clung to the screens from the overspray.

(b)(6) passed away a prisoner in his own house and she, like the (b)(6) sold out and has since moved to town.
